SKILLS

- **Technical Skills:** Python, Bash, SQL, PyTorch, TensorFlow, Azure, Git, Conda, LaTeX
 - **Soft Skills:** Problem-Solving, Analytical Thinking, Collaborative Teamwork and Leadership abilities
 - **Certifications:** Microsoft Certified: Azure Data Scientist Associate (DP-100), Azure Data (DP-900) and AI (AI-900) Fundamentals, Azure Fundamentals (AZ-900)
-

EDUCATION

University of Massachusetts Dartmouth, Dartmouth

Doctor of Philosophy, Computer Science

Expected Jan 2027

Relevant Courses: Advance Mathematical Methods, Pre-Dissertation Research

GPA: 3.967/4.0

University of Massachusetts Dartmouth, Dartmouth

Master of Science, Data Science

Expected Dec 2025

Relevant Courses: Advance Mathematical Statistics, Advance Data Mining, High Performance Computing

GPA: 4.0/4.0

EXPERIENCE

UMass Dartmouth, Computer and Information Science

Research Assistant

Jan/2024-Jan/2027

- Conducted research to enhance the guidance process in diffusion models, enabling more precise and effective image editing capabilities.
- Directed the development of advanced reasoning frameworks for Vision-and-Large-Language Models, tackling complex multi-modal reasoning challenges and achieving a 2.5% improvement in accuracy across all domains

UMass Dartmouth, Data Science

Research Assistant & Grader

Jan/2023-Dec/2023

- Optimized gravitational-wave data analysis pipeline, achieving up to 51.45% faster execution for FFTW and 61.80% for NumPy-based computations by leveraging Apple Silicon M2's architecture
- Addressed challenges in large-scale data processing and improving throughput for astrophysical data analysis, setting a new benchmark in computational performance

Cognizant, India

Mar/2021-Dec/2022

Programmer Analyst

- Developed and optimized SQL scripts, reducing query execution time by 30% for faster insurance data retrieval
- Designed and Implemented automation scripts, ensuring 100% accuracy in verifying the discrepancy between insurance costs and system-calculated costs, reducing manual intervention

Cognizant, India

Feb/2020-Sep/2020

Data Engineer Intern

- Assisted in building and optimizing a data pipeline using Apache Spark to preprocess and transform over 1 million movie records, supporting the implementation of the ALS algorithm via MLlib to improve recommendation accuracy

WingfoTech Pvt. Ltd, India

May/2019-Jul/2019

AI Intern

- Developed machine learning models to automate the data-driven decision-making process by improving prediction accuracy from 70% to 85%.
-

PROFESSIONAL ASSOCIATIONS

- International Conference on Learning Representations (ICLR) (2025)
- GenAI Explorers Club at UMass Dartmouth (2024)
- UMass-URI Gravity Research Consortium (U2GRC) at UMass Dartmouth (2023 - 2024)
- PyCBC Open-Source Software Package (2023)

PROJECTS

PhysioNet Early Sepsis Prediction Challenge with Transformers - PyTorch, Transformers, Transfer Learning (2024)

- Utilized state-of-the-art transformer architectures to diagnose sepsis up to 6 hours before clinical onset
- Improved model utility score from 0.04 to 0.26 (550% increase) by employing domain adaptation techniques to enhance generalization across patient data from different hospitals.

3D Images Classification - TensorFlow, Video Vision Transformers (2024)

- Achieved 74.5% accuracy in classifying abdominal CT scans by implementing a Multi-View Transformer from scratch, incorporating cross-view attention and MLP fusion for advanced video recognition

Image Captioning - PyTorch, Text Transformer, Vision Transformer (2023)

- Developed a Custom Image Captioning model with a pre-trained Vision Transformer for feature extraction and a custom Transformer for generating captions, and built a UI that accepts images and displays the generated captions

Patch Attack - PyTorch, CNNs (2023)

- Decreased model performance by 5-10% by identifying CNN model vulnerabilities and manipulating key image patches using mutual information and adversarial techniques
